SAR Test Report

Report No.: AGC06P120801S1

FCC ID : UOSAM298

PRODUCT

DESIGNATION : mobile phone

BRAND NAME : AMGOO

MODEL NAME : AM298

CLIENT: Amgoo Telecom Co., Ltd.

DATE OF ISSUE: Aug. 13,2012

STANDARD(S) : FCC Oet65 Supplement C June 2001 IEEE Std. 1528-2003,47CFR § 2.1093

REPORT VERSION: V1.0

Attestation of Global Compliance(Shenzhen) Co., Ltd.

CAUTION: This report shall not be reproduced except in full without the written permission of the test laboratory and shall not be quoted out of context.

Test Report Certification				
Applicant Name	:	Amgoo Telecom Co., Ltd.		
Applicant Address :		6/F,Block 3,Tongjian Building,Middle Shennan Rd, Futian District, Shenzhen, China		
Manufacturer Name	:	WATER WORLD TECHNOLOGY CO., LTD.		
Manufacturer Address	:	6 Floor, Block B, Digital Building, Garden City, No.1079 Nanhai Road, Nanshan, District, Shenzhen, Guangdong, P.R.China		
Product Designation	:	mobile phone		
Brand Name	-	AMGOO		
Model Name	:	AM298		
EUT Voltage	:	DC3.7V by battery		
Applicable Standard	:	FCC Oet65 Supplement C June 2001 IEEE Std. 1528-2003,47CFR § 2.1093		
Test Date	:	Aug. 11,2012		
		MAX SAR MEASUREMENT(1g)		
Test Results	:	Head:0.948 W/Kg (Scaling SAR=1.006 W/Kg)		
		Body:0.711W/Kg		
		Attestation of Global Compliance(Shenzhen) Co., Ltd.		
Performed Location		2 F, Building 2, No.1-No.4, Chaxi Sanwei Technical Industrial Park, Gushu, Xixiang Street, Bao'an District, Shenzhen, China		
		Gushu, Aixiang Gueel, Dao an District, Shehzhen, Ghilla

1. General Information

1.1. EUT Description

201 200011pti			
General Information			
Product Designation	mobile phone		
Test Model	AM298		
Hardware Version	T181-MB-V0.2		
Software Version	N/A		
Device Category	Portable		
RF Exposure Environment	Uncontrolled		
Antenna Type	Internal		
GSM			
Support Band	☐ GSM 900 ☐ DCS 1800 (U.S. Bands)		
TX Frequency Range	GSM 850 : 824.2~848.8MHz; PCS 1900: 1850.2~1909.8MHz;		
RX Frequency Range	GSM 850 : 869~894MHz PCS 1900: 1930~1990MHz		
Release Version	R99		
Type of modulation	GMSK for GSM		
Antenna Gain	1.0dBi		
Max. Output Power (Avg. Burst Power)	GSM850: 31.63dBm (32.74dBm Peak Power) PCS1900:28.72dBm (29.76 dBm Peak Power)		
Max. Output Power (Radiated)	GSM850: 30.57dBm- ERP PCS1900: 28.43dBm- EIRP		
Accessories			
Battery	Brand name: AMGOO Model No. : BL-4BB Voltage and Capacitance: 3.7V/650mAh		
Adapter	Brand name: AMGOO Model No. : CH4 Input& Output: AC :100-240V DC:5V		
Earphone	Brand name: AMGOO Model No. : AM298		

Note: The sample used for testing is end product.

Report No.:AGC06P120801S1 Page 4 of 110

1.2. Test Procedure

1	Setup the EUT and simulators as shown on above.
2	Turn on the power of all equipment.
3	EUT Communicate with CMU 200, and test them respectively at U.S. bands

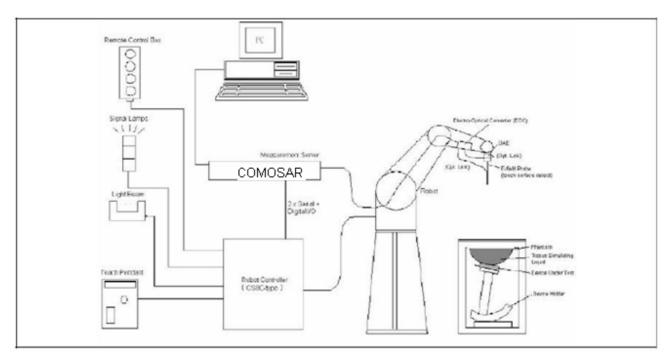

1.3. Test Environment

Ambient conditions in the laboratory:

Items	Required	Actual
Temperature (°C)	18-25	21± 2
Humidity (%RH)	30-70	55±2

2. SAR Measurement System

2.1. COMOSAR System Description

The COMOSAR system for performing compliance tests consists of the following items:

34 A standard high precision 6-axis robot with controller, teach pendant and software.

An arm extension for accommodating the data acquisition electronics (DAE).

- ³/₄ A data acquisition electronics (DAE) which performs the signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection,
- collision detection, etc. The unit is battery powered with standard or rechargeable batteries. The signal is optically transmitted to the EOC.
- The Electro-optical converter (EOC) performs the conversion from optical to electrical signals for the digital Communicate Mobile phone to the DAE. To use optical surface detection, a special version of the EOC is required. The EOC signal is transmitted to the measurement server.
- The Light Beam used is for probe alignment. This improves the (absolute) accuracy of the probe positioning.
- 3/4 A computer running WinXP and the Opensar software.
- Remote control and teach pendant as well as additional circuitry for robot safety such as warning lamps, etc.
- 3/4 The phantom, the device holder and other accessories according to the targeted measurement.

2.1.1. Applications

Predefined procedures and evaluations for automated compliance testing with all worldwide standards, e.g., IEEE 1528, OET 65, IEC 62209-1, IEC 62209-2, EN 50360, EN 50383 and others.

2.1.2. Area Scans

Area scans are defined prior to the measurement process being executed with a user defined variable spacing between each measurement point (integral) allowing low uncertainty measurements to be conducted. Scans defined for FCC applications utilize a 10mm² step integral, with 1mm interpolation used to locate the peak SAR area used for zoom scan assessments.

When an Area Scan has measured all reachable points, it computes the field maxima found in the scanned area, within a range of the global maximum. The range (in dB) is specified in the standards for compliance testing. For example, a 2 dB range is required in IEEE 1528-2003, EN 50361 and IEC 62209 standards, whereby 3 dB is a requirement when compliance is assessed in accordance with the ARIB standard (Japan).

2.1.3. Zoom Scan (Cube Scan Averaging)

Zoom Scans are used to assess the peak spatial SAR values within a cubic averaging volume containing 1 g and 10 g of simulated tissue. A density of 1000 kg/m³ is used to represent the head and body tissue density and not the phantom liquid density, in order to be consistent with the definition of the liquid dielectric properties, i.e. the side length of the 1 g cube is 10mm, with the side length of the 10 g cube 21,5mm.

The zoom scan integer steps can be user defined so as to reduce uncertainty, but normal practice for typical test applications utilize a physical step of 7x7x7 (5mmx5mmx5mm) providing a volume of 30mm in the X & Y axis, and 30mm in the Z axis.

2.1.4. Uncertainty of Inter-/Extrapolation and Averaging

In order to evaluate the uncertainty of the interpolation, extrapolation and averaged SAR calculation algorithms of the Post processor, COMOSAR allows the generation of measurement grids which are artificially predefined by analytically based test functions. Therefore, the grids of area scans and zoom scans can be filled with uncertainty test data, according to the SAR benchmark functions of IEEE 1528. The three analytical functions shown in equations as below are used to describe the possible range of the expected SAR distributions for the tested handsets. The field gradients are covered by the spatially flat distribution f1, the spatially steep distribution f3 and f2 accounts for H-field cancellation on the phantom/tissue surface.

$$f_1(x, y, z) = Ae^{-\frac{z}{2a}}\cos^2\left(\frac{\pi}{2}\frac{\sqrt{x'^2 + y'^2}}{5a}\right)$$

$$f_2(x, y, z) = Ae^{-\frac{z}{a}}\frac{a^2}{a^2 + x'^2}\left(3 - e^{-\frac{2z}{a}}\right)\cos^2\left(\frac{\pi}{2}\frac{y'}{3a}\right)$$

$$f_3(x, y, z) = A\frac{a^2}{\frac{a^2}{4} + x'^2 + y'^2}\left(e^{-\frac{2z}{a}} + \frac{a^2}{2(a+2z)^2}\right)$$

2.2. COMOSAR E-Field Probe

The SAR measurement is conducted with the dissymmetric probe manufactured by SPEAG.

The probe is specially designed and calibrated for use in liquid with high permittivity. The dissymmetric probe has special calibration in liquid at different frequency.

SPEAG conducts the probe calibration in compliance with international and national standards (e.g. IEEE 1528, EN62209-1, IEC 62209, etc.) Under ISO17025. The calibration data are in Appendix D.

2.2.1. Isotropic E-Field Probe Specification

Model	SSE5			
Manufacture	Satimo			
frequency	0.3 GHz-6GHz			
	Linearity:±0.2dB(300 MHz-6GHz)			
Dynamic	0.01W/Kg-100W/Kg			
Range	Linearity:±0.2dB			
Dimensions	Overall length:330mm			
	Length of individual dipoles:4.5mm			
	Maximum external diameter:8mm			
	Probe Tip external diameter:5mm			
	Distance between dipoles/ probe			
	extremity:2.7mm			
Appli-mobile	High precision dosimetric measurements in any exposure scenario			
phone	(e.g., very strong gradient fields). Only probe which enables			
	compliance testing for frequencies up to 6 GHz with precision of better			
	30%.			

2.3 Robot

The COMOSAR system uses the high precision robots TX90
XL type out of the newer series from Satimo SA (France).For
the 6-axis controller COMOSAR system, the KUKA robot
controller version from Satimo is used.
The XL robot series have many features that are important for
our application:

High precision (repeatability 0.02 mm)
High reliability (industrial design)
Jerk-free straight movements
Low ELF interference (the closed metallic
construction shields against motor control fields)
6-axis controller

2.4. Video Positioning System

The video positioning system is used in OpenSAR to check the probe. Which is composed of a camera, LED, mirror and mechanical parts. The camera is piloted by the main computer with firewire link.

During the process, the actual position of the probe tip with respect to the robot arm is measured, as well as the probe length and the horizontal probe offset. The software then corrects all movements, such that the robot coordinates are valid for the probe tip.

The repeatability of this process is better than 0.1 mm. If a position has been taught with an aligned probe, the same position will be reached with another aligned probe within 0.1 mm, even if the other probe has different dimensions. During probe rotations, the probe tip will keep its actual position.

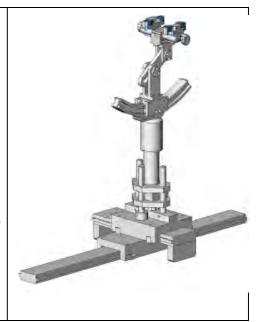

2.5. Device Holder

The COMOSAR device holder is designed to cope with different positions given in the standard. It has two scales for the device rotation (with respect to the body axis) and the device inclination (with respect to the line between the ear reference points). The rotation center for both scales is the ear reference point (EPR).

Thus the device needs no repositioning when changing the angles.

The COMOSAR device holder has been made out of low-loss POM material having the following dielectric parameters: relative permittivity ϵr =3 and loss tangent δ = 0.02. The amount of dielectric material has been reduced in the closest vicinity of the device, since measurements have suggested that the influence of the clamp on the test results could thus be lowered.

2.6. SAM Twin Phantom

The SAM twin phantom is a fiberglass shell phantom with 2mm shell thickness (except the ear region where shell thickness increases to 6mm). It has three measurement areas:

- □ Left head
- □ Right head
- ☐ Flat phantom

The bottom plate contains three pair of bolts for locking the device holder. The device holder positions are adjusted to the standard measurement positions in the three sections. A white cover is provided to tap the phantom during off-periods to prevent water evaporation and changes in the liquid parameters. On the phantom top, three reference markers are provided to identify the phantom position with respect to the robot.

Report No.:AGC06P120801S1 Page 10 of 110

3. Tissue Simulating Liquid

3.1. The composition of the tissue simulating liquid

Ingredient	835MHz	835MHz	1900MHz	1900MHz
(% Weight)	Head	Body	Head	Body
Water	40.45	52.4	54.90	40.5
Salt	1.39	1.40	0.18	0.50
Sugar	57.6	45.0	0.00	58.0
HEC	0.40	1.00	0.00	0.50
Preventol	0.10	0.20	0.00	0.50
DGBE	0.00	0.00	44.92	0.00

3.2. Tissue Calibration Result

The dielectric parameters of the liquids were verified prior to the SAR evaluation using COMOSAR Dielectric Probe Kit and R&S Network Analyzer ZVL6 .

Head Tissue Stimulant Measurement					
Frequency (MHz)	Description	Dielectric F	Tissue Temp [°C]		
900MHz	Reference result ±5% window	εr 41.5 39.425-43.575	δ[s/m] 0.97 0.9215-1.0185	N/A	
	Aug. 11,2012	41.48	0.99	21	

Body Tissue Stimulant Measurement					
Frequency (MHz)	Description	Dielectric	Tissue Temp [°C]		
900MHz	Reference result ±5% window	εr 55.0 52.25-57.75	δ[s/m] 1.05 0.9975-1.1028	N/A	
	Aug. 11,2012	55.25	1.01	21	

Head Tissue Stimulant Measurement					
Frequency (MHz)	Description	Dielectric	Parameters	Tissue Temp [°C]	
1900MHz	Reference result ±5% window	εr 40.00 38.00-42.00	δ[s/m] 1.40 1.33-1.47	N/A	
	Aug. 11,2012	39.79	1.39	21	

Body Tissue Stimulant Measurement					
Frequency (MHz)	Description	Dielectric	Tissue Temp [°C]		
1900MHz	Reference result ±5% window	εr 53.30 50.64-55.97	δ[s/m] 1.52 1.44-1.60	N/A	
	Aug. 11,2012	53.24	1.51	21	

3.3. Tissue Dielectric Parameters for Head and Body Phantoms

The head tissue dielectric parameters recommended by the IEEE SCC-34/SC-2 in P1528 have been incorporated in the following table. These head parameters are derived from planar layer models simulating the highest expected SAR for the dielectric properties and tissue thickness variations in a human head. Other head and body tissue parameters that have not been specified in P1528 are derived from the tissue dielectric parameters computed from the 4-Cole-Cole equations described in Reference [12] and extrapolated according to the head parameters specified in P1528.

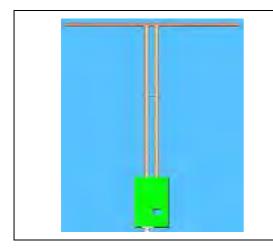

Target Frequency	head		bo	ody
(MHz)	εr	σ (S/m)	εr	σ (S/m)
300	45.3	0.87	58.2	0.92
450	43.5	0.87	56.7	0.94
835	41.5	0.90	55.2	0.97
900	41.5	0.97	55.0	1.05
915	41.5	1.01	55.0	1.06
1450	40.5	1.20	54.0	1.30
1610	40.3	1.29	53.8	1.40
1800 – 2000	40.0	1.40	53.3	1.52
2450	39.2	1.80	52.7	1.95
3000	38.5	2.40	52.0	2.73
5800	35.3	5.27	48.2	6.00

⁽ ε_r = relative permittivity, σ_s = conductivity and ρ_s = 1000 kg/m₃)

SAR Measurement Procedure 4.

4.1. SAR System Validation

4.1.1. Validation Dipoles

The dipoles used is based on the IEEE-1528 standard, and is complied with mechanical and electrical specifications in line with the requirements of both IEEE and FCC Supplement C. the table below provides details for the mechanical and electrical Specifications for the dipoles.

Frequency	L (mm)	h (mm)	d (mm)
900 MHz	149.0	83.3	3.6
1900MHz	68	39.5	3.6

Report No.:AGC06P120801S1 Page 14 of 110

4.1.2. Validation Result

System Performance Check at 900 MHz &1900MHz for Head								
Validation Kit: SN 46/11DIP 0G900-185								
Frequency [MHz]	Description	SAR [w/kg] 1g	SAR [w/kg] 10g	Tissue Temp.[°C]				
900MHz	Reference result ± 10% window	10.9 9.81 to 11.99	6.99 6.29 to 7.69	N/A				
	Aug. 11,2012	10.56	6.54	21.0				
Validation Kit	:: SN 46/11DIP 1G900-	187						
Frequency [MHz]	Description	SAR [w/kg] 1g	SAR [w/kg] 10g	Tissue Temp.[°C]				
1900 MHz	Reference result ± 10% window	39.7 35.73 to 43.67	20.5 18.45 to 22.55	N/A				
	Aug. 11,2012	41.74	21.50	21.0				
Note: All SAR values are normalized to 1W forward power.								

4.2. SAR Measurement Procedure

The COMOSAR calculates SAR using the following equation,

$$SAR = \frac{\sigma |\mathbf{E}|^2}{\rho}$$

σ: represents the simulated tissue conductivity

p: represents the tissue density

The EUT is set to transmit at the required power in line with product specification, at each frequency relating to the LOW, MID, and HIGH channel settings.

Pre-scans are made on the device to establish the location for the transmitting antenna, using a large area scan in either air or tissue simulation fluid.

The EUT is placed against the Universal Phantom where the maximum area scan dimensions are larger than the physical size of the resonating antenna. When the scan size is not large enough to cover the peak SAR distribution, it is modified by either extending the area scan size in both the X and Y directions, or the device is shifted within the predefined area.

The area scan is then run to establish the peak SAR location (interpolated resolution set at 1mm²) which is then used to orient the center of the zoom scan. The zoom scan is then executed and the 1g and 10g averages are derived from the zoom scan volume (interpolated resolution set at 1mm³).

When multiple peak SAR location were found during the same configuration or test mode, Zoom scan shall performed on each peak SAR location, only the peak point with maximum SAR value will be reported for the configuration or test mode.

Report No.:AGC06P120801S1 Page 16 of 110

5. SAR Exposure Limits

SAR assessments have been made in line with the requirements of IEEE-1528, FCC Supplement C, and comply with ANSI/IEEE C95.1-1992 "Uncontrolled Environments" limits. These limits apply to a location which is deemed as "Uncontrolled Environment" which can be described as a situation where the general public may be exposed to an RF source with no prior knowledge or control over their exposure.

Limits for General Population/Uncontrolled Exposure (W/kg)

Type Exposure	Uncontrolled Environment Limit
Spatial Peak SAR (1g cube tissue for brain or body)	1.60 W/kg

6. Test Equipment List

Note: Per KDB 50824 Dipole SAR Validation Verification, AGC Lab has adopted 3 years calibration intervals. On annual basis, every measurement dipole has been evaluated and is in compliance with the following criteria:

- 1. There is no physical damage on the dipole;
- 2. System validation with specific dipole is within 10% of calibrated value;
- 3. Return-loss is within 20% of calibrated measurement;
- 4. Impedance is within 5Ω of calibrated measurement.

9. Test Results

9.1. SAR Test Results Summary

9.1.1. Test position and configuration

Head SAR was performed with the device configured in the positions according to IEEE1528, and Body SAR was performed with the device 15mm from the phantom. Body SAR was also performed with the headset attached and without.

9.1.2. Body SAR with Headset

Testing with the headset was performed at the position and channels that resulted in the highest body SAR. This operation mode represents the maximum SAR situation, when listening to music by headset. SAR without the headset attached was significantly higher than with the headset, and also was verified several times and confirmed, so the final test data shown were the worst case without headset. In the Body SAR test result table, body-worn means display of device down, body-front means display of device up.

9.1.3. Operation Mode

During the head SAR test, the device was transmitting with maximum 1 uplink timeslot; during the body SAR test .Additionally, this device doesn't support dual transfer mode (DTM).

9.1.5. Test Result

Test Laboratory: AGC Lab Date: Aug. 11,2012

PCS 1900 High-Touch- Right<SIM 2> DUT: mobile phone; Type: AM298

Communication System: Generic GSM; Communication System Band: PCS 1900; Duty Cycle: 1:8.3;

Conv.F=6.42;Frequency: 1909.8 MHz; Medium parameters used: f = 1900 MHz; $\sigma = 1.39 \text{ mho/m}$; $\epsilon r = 39.79$;

 $\rho = 1000 \text{ kg/m}^3$;

Phantom section: Right Section

Ambient temperature ($^{\circ}$ C): 21.0, Liquid temperature ($^{\circ}$ C): 21.0

Satimo Configuration:

· Probe:SSE5; Calibrated: 12/09/2011

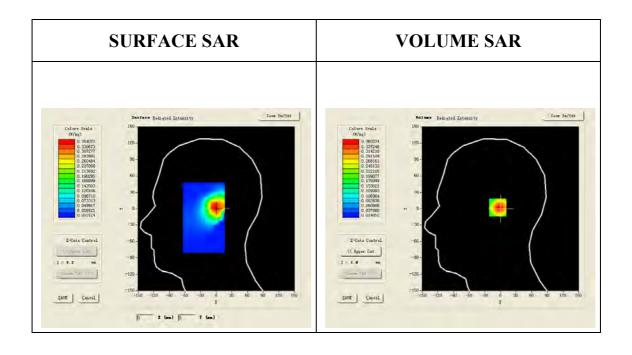

· Sensor-Surface: 4mm (Mechanical Surface Detection)

· Phantom: SAM1; Type: SAM

· Measurement SW: OpenSAR V4_02_01

Configuration/PCS1900 High-Touch-Right/Area Scan: Measurement grid: dx=20mm, dy=20mm Configuration/PCS1900 High-Touch-Right/Zoom Scan: Measurement grid: dx=8mm, dy=8mm, dz=5mm;
